

GA110 – READY TO INSTALL GATE – REMOVING FOR NON-USE

Our GA110 Ready to Install Gate video on YouTube shows the gate can be removed from the sidebar for periods of non-use. However it is not the easiest thing to do and it doesn't advise anything about this in the instructions.

There are little tabs on the pivot post for the gate panel itself. If the consumer turns the gate panel 90 degrees from the hinge sidebar and pulls up, they will be able to remove. It's a little challenging the first time, but gets easier after you learn the placement of the posts/tabs.

Photos of the hinging and posts below for your reference as well as a link to the direct video.

- **Full Video:** https://www.youtube.com/watch?v=HQ33wJqR_8w
- **Removal from wall/hinging is approximately 1:43 into the video**

- If you look at this photo below, you will see the tabs on the hinge post as well as the slot on the sidebar
This photo is with the gate turned at a 90 degree angle from the sidebar/hinges.
